WORK EXPERIENCE

London Computer Systems **May 2023 - Present**
Software Developer *Mason, OH*

- Develop and maintain Net Dial Tone (NDT), a hosted VoIP phone platform that integrates with Rent Manager, built with Asterisk, OpenSIPS, Node.js/TypeScript, C# .NET, Angular, MySQL, and Kubernetes.
- Created and own the interactive call flow visualizer that customers and support staff use to review call flows before saving them and to trace misrouted calls.
- Built server-side call delivery for NDT's Android and iOS apps, ringing all of a user's devices, stopping ringing on the other devices when one answers, keeping call state in sync, and handling weak connections.
- Designed and developed a configurable state machine for building complex Asterisk ARI call flows and dialplans.

Jarvizar **Oct. 2023 - Present**
Owner and Developer *Cincinnati, OH*

- Built City Model, a TypeScript, React, and Three.js web app that turns any area of the map into a multicolor 3D printable model, with terrain, buildings, roads, and water from Overture Maps and public elevation data.
- Integrated LiDAR from 50+ public sources such as USGS 3DEP, NOAA, and NRCan, decoding EPT, COPC, Esri I3S, and LAZ point clouds in Web Workers, and reported coverage gaps and errors to the publishers.
- Loaded Overture's GeoParquet data directly from S3 with HTTP range requests, downloading only the row groups that cover the area, and projected every layer from WGS84 into a shared local east-north-up frame.
- Built SVGmap, which turns OpenStreetMap vector tiles into SVG maps for laser engravers, pen plotters, and print.
- Design and publish 3D printable miniature maps with 31K+ followers and 180K+ downloads, mostly on MakerWorld. Featured creator on Thingiverse, with three models featured on MakerWorld.
- Developed accounts and paid tiers on Cloudflare Workers and D1, launching through crowdfunding in Nov. 2026.

Martin & Associates **Aug. 2019 - Dec. 2021**
Software Developer (Co-op) *Cincinnati, OH*

- Led development of ERP and CRM integration services using C# .NET, REST APIs, Quartz.NET, and ProvideX.
- Worked directly with clients on feature requests, integration issues, and support using BeyondTrust/Bomgar.

PROJECTS

3D Map Creator | Python, Blender **Early 2026**

- Blender add-on that City Model grew out of, with a Python downloader for Overture Maps and LiDAR data.

Solar System Viewer | JavaScript, Three.js, WebXR **2023 - 2025**

- 3D model of the solar system with a flight mode, VR, and star systems from the NASA Exoplanet Archive.

JarLang | Python **Mar. 2023 - Sept. 2026**

- Programming language with a parser, semantic analyzer, interpreter, x86-64 compiler, and browser playground.

SKILLS

Languages: TypeScript, JavaScript, Python, C#, SQL, GLSL
Mapping & GIS: MapLibre GL, Leaflet, QGIS, OpenStreetMap, Overture Maps, GeoParquet, vector tiles, GeoJSON, LiDAR (LAZ, COPC, EPT), proj4js, pyproj, shapely
3D & Visualization: Three.js, WebGL, WebXR, D3.js, elkjs, Blender, Web Workers
Frameworks & Backend: React, Angular, Node.js, .NET, REST APIs, WebSockets, MySQL, Cloudflare Workers, D1/SQLite
Infrastructure & Testing: Docker, Kubernetes, CI/CD, Git, Vitest, Playwright, WCAG accessibility

EDUCATION

University of Cincinnati, College of Engineering & Applied Science **Graduated May 2023**
Bachelor of Science, Computer Science *Cincinnati, OH*

- Awarded Cincinnatus Scholarship, Dean's List; 3.5/4.0 GPA
- Senior design: NASA Exoplanet Archive Search, an Angular web app for searching NASA's Exoplanet Archive.
